

no garbage (sniffs) and 2 sightings (sniffs) detailed to food

PLATE II

- A. Cement bags piled on outfall pipe which provide an additional dimension to the artificial habitat for reef organisms.
- B. View of substratum and fishes (acanthurids and scarids) near the present outfall site.
- C. School of rabbitfish (Siganus argenteus and S. spinus) feeding on benthic algae adjacent to outfall pipe in July 1977.
- D. Stand of the dominant alga species Galaxaura oblongata growing on outfall pipe and substratum in the vicinity of the previous point of discharge.
